

WILLIAM HUNTER, M.D.

Dr. Hunter's career has revolved around examining ways to make implantable medical devices "bioactive" and "smarter" through the use of technologies borrowed from other industries such as pharmaceutical coatings, surface modification and sensor technologies. As an inventor with over 200 patents and patent applications to his name, he has been involved in the invention and development of the TAXUS® Drug-Eluting Coronary Stent, the Zilver PTX Peripheral Drug-Eluting Stent, and the Quill barbed wound closure device; combined these products have been used in over 40 million patients and recorded revenues exceeding \$25 billion. His latest venture, Canary Medical, utilizes implanted sensor, battery and transmission technology to create "smart" implanted medical devices that can "self report" on function, activity, wear, complications and patient outcomes for up to 20 years.

Dr. Hunter has been the President and CEO of Cardiome Pharma Corp in Vancouver, BC since 2012. Cardiome (NASDAQ: CRME) is an integrated, commercial, specialty pharmaceutical company that markets and sells acute care parenteral drugs in Europe, Canada and over 50 other countries around the world. Previously, Dr. Hunter co-founded and served as President and Chief Executive Officer of Angiotech Pharmaceuticals (1992-2011). After founding the Angiotech while still in medical school in 1992, he grew the Company to become a profitable, diversified, device company with over 1,400 employees, several thousand commercially available products, and 12 facilities in 5 countries.
